### ALL ABOUT MILK

Milk is our best all-round food. It is the most perfect food we have. It is also one of the cheapest foods even at the present prices. Milk is the most difficult of all our foodstuffs to collect, handle and transport. It requires the greatest care from pasture to pail and from pail to palate. Milk spoils quicker than any other food. It spoils even quicker than fresh fruit and berries. It must be kept clean, cool and covered. Milk tastes good; it is easily digested and is very nourishing. It makes bone, brawn and blood. In fact, the vigor and success of a nation depends largely upon the amount of milk it uses. In the United States we use something like forty billion quarts of milk a year. This would make a lake large enough to float all the navies of the world. Yet this is only about half a pint of milk a day for each person. Only one-quarter of this is actually used as milk the other three-quarters being made into butter, cheese and other milk products.—Rosenau.

Miss Mable Walters returned to the State University yesterday after spending Christmas in the city.
